

Testing - Minh Nguyen

User Story 3 - 2 Points

As a user, I want my posts to include location and directions

Tasks:

- Add a directions / location box to the post page
- Use GPS coords provided by the user to display a boulder's location with Google Maps

Scenario

1. Go to "New Climb".
2. Fill out the form:
Climbed by: Mickey

Route Name: Impossible Climb

Route Difficulty: 15

Location: Half Dome

Directions: Drive to the nearest parking lot and then walk to the base through the trees.
Shouldn't be hard to miss, it's pretty tall.

Description: This was the hardest climb I've ever done. I had no equipment and I almost fell to my death several times. The view at the top was so worth it though. Definitely recommend.
3. On the map, drag the marker and the GPS coordinates will automatically load where the marker drops.
4. Enter a location in the search bar and the marker will update and drop on new location and update GPS coordinates.
5. Drag marker to pin exact location of climb.
6. Press "Submit".
7. Navigate to new climb post on home page
8. Press "See more!"
9. Map on post page will load location based on GPS coordinates. User will be able to zoom in/out and also see map in Satellite mode.
