

Sprint 3 Report

Product: First Ascent

Team Name : FirstAscent

Date : 11/18/2018

Actions To Stop Doing

Actions to Start Doing

- Work on a user profile page with the features specified in Sprint 4 Plan
- Begin implementing a search function

Actions To Continue Doing

- Learn about the new technology as we progress through our project. The team should continue to learn how to work with React.js, Javascript, HTML, and firebase so that we can improve our productivity in adding features to our website.
- Continue working on the UI by adding CSS formatting to all the components of the site.
- Continue working on the front end aspect of the sign-up / log-in page. Make the UI prettier to view for visitors to the site. We don't want the site to appear as a basic and unattractive webpage. We want the site to attract users into using the site.

Completed

Task 1. [2] Add a way to upload a picture to the database from the new post page

Task 2. [3] Implement js to allow the user to draw lines on their post picture

Task 3. [2] Create a way to save the lines drawn to the uploaded picture in the post

Task 4. [3] Create a rating system that changes based on other user's opinion (average)

Not-Completed

Task 5. [2] Create a comment section for other user's to leave feedback
