

Testing - Ethan Warkentin

Sprint 3 - User Story 2

- As a user, I want to draw route lines for the climb to show other people where the route goes
 - Tasks
 - Implement js that allows the user to draw lines on a picture they want to upload
 - Create a way to save lines drawn to the uploaded picture

Scenario (from "drawline.js")

- 1) Go to the New Climb page
- 2) Choose the picture you want to upload from your local folder
- 3) Load the image to the canvas using the load button
 - a) The image must be resized to fit the canvas (Height:420px , Width: 625px)
- 4) Once the image is loaded test drawing function
 - a) Click and hold down at the desired starting point
 - b) While holding, drag the cursor to the desired end point
 - c) Release the mouse button
 - d) A line should appear
- 5) Repeat the process until the desired route line is drawn

Notes

- Could not find a way to use the canvas image as the upload image for the post
- To use the canvas image with new lines the user must save the image locally and then upload that new image at the bottom of the form
